# 1.Import your files

2. Open composition "Picture 01"
All pictures are numbered,
## you can easily determine the sequence

3. Drag your image to composition "Picture ##" above all layers. You need to resize the picture by the field parameter Scale

## 4. Open to composition "Text ##" and change double click

5. All necessary settings are searched
in the layer "SETTING" (some templates do not have a function)

In the tab "control effect" you can change
the settings at your discretion

6. After all the changes,
return to composition "Render Me" and check
Press CTRL+M to render
Select the output file settings
I usually use: h264, bitrate: 20.0 Mbps for quality results
Press button Render

Nice view and successful work!
I look forward to your assessment, if you like the template.
Spend a little time to vote, I appreciate it
